The image shows a Visual Studio Code editor window with a PHP migration file open. The file is named '2023-03-08-035609_DataAngsuran.php' and is located in the 'app > Database > Migrations' directory. The code defines a 'DataAngsuran' class that extends the 'Migration' class. The 'up()' method is implemented to add a new table to the database. The table has the following columns: 'id' (integer, unsigned, auto-increment), 'kode_nasabah' (varchar, 20), 'alternatif_angsuran' (double), 'perhitungan_angsuran' (double), 'tempat_kerja_ke_bank' (varchar, 20), and 'pembayaran_kolektif' (varchar, 20). The left sidebar shows the project structure with folders for 'Controllers', 'Database', and 'Migrations'. The bottom status bar shows 'OUTLINE' and 'TIMELINE' tabs.

The screenshot shows a Visual Studio Code editor with a PHP file named 'index.php' in the 'views' directory. The code is a Blade template for an installment management system. It includes a sidebar menu, a header section, and a main content area with a form for adding installments. The form has fields for installment code, amount, and a dropdown for installment type. The code uses Laravel's Blade templating engine and includes a JavaScript alert for success messages.

```
